

HOLLAND ENGRAVING

SIGNAGE MAINTENANCE & CLEANING

Care should be taken while cleaning Architectural and Braille signage to prevent cleaning solutions and moisture from coming in contact with the lettering and Braille. If moisture comes in contact with the lettering or Braille it could compromise the adhesive. Please DO NOT use any solutions that are solvent based as they could discolor and damage signage.

Recommended Care:

- 1.) Clean signage with a clean damp cloth by gently wiping in one continual motion from the top of the sign towards the bottom on the signage. *terry cloth is not recommended
- 2.) After wiping signage with damp cloth, be sure to remove any excess moisture with a secondary dry cloth to prevent moisture from seeping behind Braille & lettering and deteriorating adhesive.
